# WORK PACKAGE 2: PREPARING THE COMPANY CASES AND BUILDING THE PROCESS TRAINING MODULES

Deliverable 2.4
Module 2

WP2	D2.4 Module 2
Authors	Anne Eskola
Short Description	This document contains deliverable 2.4, the curriculum of Module 2 developed by ProCESS project.
Status	Final
Distribution level	Public
Date of delivery	25/10/2022 Reviewed in March 2024
Contributions by:	Anne Eskola, Adriana Sava, Violeta Firescu, Simona Noveanu, Sorin Suteu, Remus Lungu, Marcella Zoccoli, Ari Korhonen, Vincent Goubier, Philippe Fournier, Anne Décoret-Ahiha, Sophie Bouquerel, Iveta Ludviga, Inese Sluka, Dace Andersone, Inga Berzina

#### 1. ProCESS method

The ProCESS method is an innovative method of complex problem solving in organizational context where rational and non-rational (sensorial, emotional, and spiritual) approaches are mobilised with the help of SESS (sensorial, emotional, and spiritual skills) workshops. The innovative nature of ProCESS reveals itself through systematically combining non rational and rational skills, fostering a holistic approach and giving a place to SES skills in management training and in businesses. This happens by convening standardized workshops which summon the sensory, the emotional and the spiritual skills in a manner that helps participants to learn how to address real complex cases.

The aim of ProCESS method is to teach current and future managers to break out of traditional thought patterns, complement traditional methods of analysis, upset participants' established intellectual order, and broaden their perspectives. Indeed, ProCESS has multicultural inputs, approaches and heterogeneity that lead to the analysis of situations from different points of view and sensitivities, and therefore a proliferation of ideas and the restitution of a broad range of solutions which will infuse companies from various sectors.

In ProCESS method, Theory U is adapted for a series of six future search-oriented workshops where students are engaged in coaching circles with a facilitated learning and innovation process around the complex problem solving. The U process is a tool for enabling leaders to learn not only from past experience but from the emerging future. It allows to operate pursuing emerging possibilities rather than reflecting on and reacting to past experiences. Theory U thus offers a practical method of learning that reveals the organization's blind spots by directing the attention to the interior condition and internal forces that underlie social change.

Theory U responds to a world in crisis (Heller, 2019) and invites leaders to transform their thinking process from one based on isolated datasets, facts, and observations into a more holistic approach that is fundamentally intuitive (Szameitat & Nestler, n.d.). Theory U suggests that true leadership is about shifting from a personal, individual-centred, self-interest ego-systemic approach to a collective, group-centred, multi-stakeholder approach where society should get to "eco-system awareness"-driven forms of cooperation. This process is the journey of the U. (Scharmer, 2007; Trigger, Trends in Global Governance and Europe's role, 2019.)

The model describes seven ways of attending to and co-shaping the world and developing seven essential leadership capacities: 1) Downloading means repeating the same old patterns of thought so that "the world is frozen by our old mental habits and past experiences; nothing new enters our minds". 2) Seeing or observing means that we suspend our habitual judgment, wake up with fresh eyes and to tolerate that nothing is happening. 3) Sensing means that our perceptions widen and deepen and "the boundary between observer and observed opens up." 4) Presencing happens when we let go of the old patterns and assumptions and "the boundary between observer and observed collapses into a space for the future to emerge." 5) Crystallizing is when "envisioning happens from the field of the future rather than from our ego. 6) Prototyping is exploring the future by doing and by improvising and by linking the intelligence of the head, heart, and hands. 7) Co-Evolving or performing means embodying the new through new practices, processes, and infrastructures. (Scharmer, 2007: Presencing Institute, 2022; McKinney, 2018.)

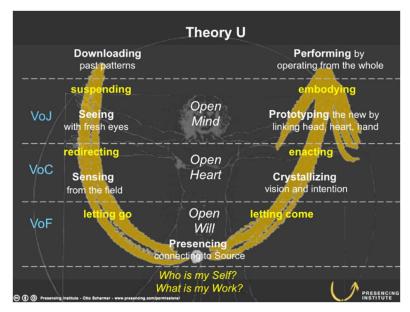

Figure 1. Theory U (Wikimedia Commons, n.d.)

The "U" is a graphic expression of the journey. The left-hand side of the picture describes the move downwards away from past prejudices and resistance of thought, emotion and will, closer to the outside world embodying the newly acquired capacities, finding common intent and sensing the best future possibilities. At the bottom of the U-shape there is the moment of presencing (i.e., sensing which means feeling the future possibility and presence which means the state of being in the present moment), which is the point between letting go all that is not essential and getting ready for the future to emerge through shared wisdom. This point describes the ability to overcome disruptions by "acting from the presence of what is wanting to emerge". It is important to normalize not knowing the answers and emphasize the value of quiet reflection to allow ideas to emerge. On the way to the threshold of presencing, people must quiet down their Voices of Judgment, Cynicism, and Fear. (Scharmer, 2007; Presencing Institute; Trigger, Trends in Global Governance and Europe's role, 2019.)

The right-hand side describes the move upwards where answers are found in co-operation with others. Co-creation is a tool to overcome crises, whether economic, social, cultural, ecological, spiritual or personal, and it is a process of identifying, prototyping and refining new forms of commitment and action or social reality creation. (Presencing Institute; Trigger, Trends in Global Governance and Europe's role, 2019; Scharmer, 2009.) Once a group goes through this process, individual members and the group begin to operate with a heightened level of energy and sense of future possibility and to function as an intentional vehicle for an emerging future (Presencing institute, n.d.).

The foundational capacity of the U is listening to others, oneself and what emerges from the collective in an open space in which others can contribute to the whole and suspend the voice of judgment. The preparation for the experience at the bottom of the U requires the tuning of three inner instruments: the open mind, open heart, and open will. This requires active sensing together as a group. When an open heart allows to see a situation, the open will enables to sense what is wanting to emerge. Moving down the left side of the U requires the group to open up and deal with the resistance of thought, emotion, and will. Moving up the right side requires the integration of thinking, feeling and will in the context of practical applications and learning by doing. (Presencing institute, n.d.).

The curriculum has been built on general guidelines for each separate part of process U to help SESS trainers in constructing their own curriculum based on their own set of skills and teaching methods.

6

After the general description, there are four different example curricula to give a concrete idea on how the set of six different workshops could look like in real life. However, the realization of the workshops is not limited to these examples, and it is also possible to mix elements of different curricula as long as they correspond their place in the series of six different workshops.

#### 2. Curriculum overview

General description	
Course title	Training day for sensorial, emotional and spiritual skills
Time	7 hours
Sequencing	6 parts
ECTS credits if applicable	n/a
Course competences	Awareness, connectedness, alignment
Course objectives	To get familiar to solve complex problems with sensorial, emotional and spiritual skills
Expected outcomes	Understanding the concepts of complexity and SES skills, the meaning of participant attitude and commitment, being able to connect to oneself and others to be able to work in a team, co-operation and co-creation, alignment and finalizing
Course contents	The course contains 6 parts of different objectives that are explained hereafter
Evaluation scale	Pass/Fail
Part 1	
Part title	Prelude and practice: Introduction to SES skills and complexity
Time	1 hour
Part competences	Awareness
Part objectives	The presentation of the seven-hour workshop to understand the concept of SES skills and to get some theoretical background for the workshop. The theoretical backgroud can be explained from the standpoints of Theory U and design thinking crystallising into ProCESS method.

7

	,
Part expected outcomes	Understanding of SES skills
	Understanding and reasoning for CEC skills, portisinent attitude and
Part content	Understanding and reasoning for SES skills, participant attitude and commitment
Part training methods	Presentations, activation methods, discussion, examples
Part training tools	PowerPoint, storytelling, questionnaires
Part evaluation	n/a
methods	
Part evaluation criteria	n/a
Names of SESS trainers	Marcella Zoccoli, Vincent Goubier, Simona Noveanu, Philippe Fournier,
	Sorin Suteu
Part 2	
Part title	Power of body and mind
Time	1 hour
Part competences	Awareness, connectedness
Part objectives	Introduction of natural and physical life
Part expected	Connect to ourselves
outcomes	
Part content	Attention to sensing, perceiving, feeling, discovering and spiritual
	intelligence
Part training methods	Practice and demonstration
Part training tools	Music, sounds, dance, chair, images, multimedia, meditation, scents
Part evaluation	Testimonials, observation, reflection
methods	
Part evaluation criteria	Pass: Active participation and reflection
Names of SESS trainers	Marcella Zoccoli, Ari Korhonen, Sophie Bouquerel, Anne Décoret-
	Ahiha, Simona Noveanu, Sorin Suteu, Philippe Fournier, Dace
	Andersone, Sorin Suteu
Part 3	
Part title	Managing emotions through hidden talents
Time	1.5 hours
Part competences	Awareness, connectedness
Part objectives	To perceive, describe and manage emotions
Part expected	To increase the ability to work in team
outcomes	
Part content	Being aware of the emotional flow
Part training methods	Practice
Part training tools	Music listening, music improvisation, dance, images, video sequences,
	drawing, dialog, drama, writing, meditation
Part evaluation	Testimonials, observation, reflection
methods	
Part evaluation criteria	Pass: Active participation and reflection
Names of SESS trainers	Marcella Zoccoli, Sophie Bouquerel, Simona Noveanu, Philippe
	Fournier, Dace Andersone, Julija Jacquemod
Part 4	

Part title	Connection for better interaction			
Time	1 hour			
Part competences	Awareness, connectedness			
Part objectives	To connect to common values			
Part expected	Co-operation and co-creation			
outcomes				
Part content	Connecting to ourselves and others, co-sensing			
Part training methods	Practice			
Part training tools	Voice, dance, movement, postures, physical space, visual examples,			
	tests, painting, Lego serious play, yoga			
Part evaluation	Testimonials, observation, reflection			
methods

#### 3. Example curricula

#### **WORKSHOP SYLLABUS – EXAMPLE 1**

General description	
Course title	Mobilising sensorial, emotional and spiritual capacities to manage in and
	with complexity
Time	7 hours
Sequencing	6 parts
ECTS credits if	n/a
applicable	
Course competences	Awareness, connectedness, alignment
Course objectives	Be aware that sensorial, emotional and spiritual capacities can help to
	solve complex problems
Expected outcomes	Understanding the concepts of complexity and SES skills, being able to
	connect to oneself, experiencing body abilities through SES skills, relying
	on one's SES skills efficiency to help solving complex problems, incentivize
	the desire to train them to improve their performance.
Course contents	The course contains 6 parts of different objectives that are explained
	hereafter
Evaluation scale	None
Names of SESS trainers	Vincent Goubier, Philippe Fournier, Anne Décoret-Ahiha, Sophie Bouquerel
Part 1	
Title	Introduction to complexity
Objectives	Presentation of the 3-hours workshop in which various exercises (listening,
	moving, rhythms beating, focusing attention, mindfulness) should allow
	participants to be aware of their SES skills and to associate them with
	complex problems solving.
	Part #1 allows to understand what complexity is, its ever more prominent
	place in our world and the fact that traditional methods based on
	rationality and scientific approaches are less and less efficient.
Outcomes	Understanding the concepts of complexity.
	Become aware of the complexity of any organisation.
	Gain an awareness about complexity, accept and seize opportunities
	offered by uncertainty, ambiguity and volatility.
Place in ProCESS	Part #1
method	
Description	Our life means multiple and variable interactions between human beings,
	as components of the world complex system. Complexity is very different
	of Complication. A complex system has several characteristics described
	among others by E. Morin. It is open, with multiple components, which
	are not constant (entering or exiting the system, varying in time,),
	including antagonist logics, order and disorder, emerging occurrences,
	so it is never possible to understand how each component of the system
	evolves and a systemic approach is the unique way to deal with it.

#### 10

Part #1 of the workshop is dedicated to understanding complexity, by asking participants to give examples of common daily situations where the different complexity characteristics are visible. These examples are expected at an individual and organizational level. VUCA world concept is introduced.  Three main ways to manage in complexity are proposed:  - Complex thinking Mobilization of sensorial, emotional, and spiritual capacities (SES Skills) complementing rational and analytical abilities. However, as Western education does not cultivate these skills, it is necessary to train them before being able to use them effectively Thinking out of the box through engagement with works of art.  This part end with explanations of what is complex thinking and how it can be mobilized in real complex situations. The positive aspects of complexity (openness of systems and opportunities) and the human side of decision making are highlighted.  Time 1 hour  Instructions Openminded attitude and mindset to be able to play with complexity.  Materials needed Video projector and PowerPoint. method	Place in ProCESS	•						
	method							

Description	According to the <i>theory of embodied cognition</i> , human cognition is								
	influenced by the experiences of the body in a physical world.								
	Furthermore, the brain is not just connected to the body, but the body								
	activities also influence the brain. For example, 70-80% of the human brain								
	is related to hands and this link is twofold, thus working with hands								
	develops the human brain.								
	According to <i>design thinking</i> , the reality is constructed by the people living								
	it, and decisions are more emotional than logic. To use design thinking,								
	sensorial and emotional skills – that allow people to emphasize with the								
	user, not only at a single user but also at his/her interaction with a wider								
	environment, even universe – are needed. Skills to look holistically at								
	complex problems are also needed, to be able to look into the future, to								
	understand "the connectedness or relationship that a person has with								
	their self, others, the environment and a divine or a transcendent being or								
	concern" (spiritual skills). These skills in combination are called SES skills.								
	Senses (5 or may be more), emotions (4/6 basic emotions according to								
	Goleman D. or Ekman P.), multiple intelligences (Gardner H.) and spirit are								
	described. Demonstration that these human capacities have to be trained								
	to be performant are conducted.								
	Based on the theory of embodied cognition and design thinking, the								
	ProCESS methodology aims to develop an original and innovative								
	methodology to deal with complex management cases through alternating								
	sequences of mobilization of Sensory, Emotional, and Spiritual (SES)								
	intelligence, in addition to rational capacities.								
	To train SES skills, the ProCESS method uses the <i>Theory U</i> approach. The								
	essence of Theory U is that by moving through the "U" process the user								
	learns to connect to the essential "Self", goes through the process of								
	"presencing" which means "sensing" and "presence".								
Time	1 hour								
Instructions	Positive and openminded attitude.

Title	The Principles	of Liste	ning, of Resonance	e, and	of Energy Tran	smission
Objectives	capacities for courselves in or	ommur der to f	through various list nication and manag eel our relationship munication skills	eme	nt, and how to b	•
Outcomes			e's abilities to perce e the opportunities		•	f a relational
Place in ProCESS method	Part #4					
Description	Analyze the various principles of listening Inner song exercises to develop listening through the ear, the organ of sound reception Listening exercises to enable an awareness of the communication of energy in the vibratory phenomenon of sound Illustrations of several acoustic laws that have a direct impact on communication: the law of resonance, the laws of attraction, harmonics					
Time	1 hour					
Instructions	The trainer invites the participants to form a circle in a wide space be the piano. Exercises are designed to experience sensorial approach communication and management  Exercise 1: Piano improvisation. In this exercise, the trainer asks a participant who never plays piano before, to come to play with him/ The participant must sit at the right side of the trainer, play only with finger, and use only black keys. The trainer uses his/her left hand to the harmonic basis, and with his/her right hand, he/her plays a first combination of notes issuing a sort of request melody. The participa to improvise an answer. The exercise run many musical sentences, e rapid or slow, with high volume or low volume, brief or longer. Participation of slow, with high volume or low volume, brief or longer. Participation of the participation of slow, and the participation of slow, with high volume or low volume, brief or longer. Participation of the participation of slow, and the participation of slow volume, brief or longer. Participation of slow, and the participation of slow, and the participation of slow volume, brief or longer. Participation of slow, and the participation of slow volume, brief or longer. Participation of slow volume, brief or longer. Participation of slow volume, and the participation of slow volume, brief or longer.				ks a h him/her. hly with index and to play a first rticipant has nces, either

join the right note can be taken into charge by another participant, placed in front of him/her, looking him/her straight in the eye, and singing the right note until unison arrives and it always arrives. This exercise shows how energy can be transferred from one people to another. This can be applied to leadership and team building.						
Exercise 3: Rhythms. Participants are requested to reproduce rhythms achieved by the trainer, which are more and more complex, combining voice. They are asked to close their eyes to be more concentrate on sensorial messages. Participants become aware of the power of sensorial approach. It never works if their try to think or count. Some other exercises can demonstrate the importance of rhythm and melody in communication between people, to learn to control the musicality of their speeches.

Instructions	Meditation a	as a guide i	for decision						
	carcacion c	a Baiac							

Exercise 1: Guided meditation, taking up again the different contributions on availability, attention, slowness, description and then connecting it with the way I am placed in the resolution of the complex case (what are my needs for this project to succeed in the best possible way? what is important to me and that I will take care of while carrying it out? what is currently putting me in difficulty or in question in the resolution of this complex case?)

Theoretical sharing on the power of intention and on the clearness of my position in order to understand the influence of these two elements. Understanding cognitive biases and other obstacles to innovation (fear, judgment, certainty, focus, binary thinking, ...)

#### Slowness and decision.

Exercise 2: Standing in a line, the participants perform and repeat a sequence of movements that invites them to slow down step by step, coordinating different speeds between arms and legs. While performing the exercise, their attentional mobilization increases in intensity and they have to specify more and more attention to details. At the end of the exercise, they are asked to make a final effort to return to the first gesture performed in synchronization with each member of the group. After the realization of the exercise the participants are invited to describe precisely and exhaustively a short moment of what they have experienced, considering the different levels studied previously in the workshop.

Theoretical sharing: Slowness is presented as a way to perceive more and better. A connection is made with neurosciences, in particular with the two speeds of the brain according to Kahneman. This time of sharing shows the importance of description (before any automatic classification) as a possible step to activate Kahneman's system 2.

If possible, in addition, presentation of the notion of resonance according to Harmut Rosa and of the 4 levels of listening according to Otto Scharmer. Then each person will express what inspires them to be grateful in this process and will share a point of transformation they have experienced.

#### **WORKSHOP SYLLABUS – EXAMPLE 2**

General description	
Course title	COMPLEXITY "Sonaatti" - 6 ProCESS workshops journey (JAMK.fi)
Time	7 hours (inclusive of little break moments)
Sequencing	6 workshops
ECTS credits if applicable	n/a
Course competences	Awareness, alignment, and connection
	*https://processproject.eu/teaser-video-on-process-project/
Course objectives	To get familiar to solve complex problems with sensorial, emotional, and
	spiritual skills and become aligned, conscious, and creative
	managers/leaders.
Expected outcomes	Understanding the concepts of complexity and SES skills, the meaning of
	participant attitude and commitment, being able to connect to oneself,
	others and even to something "greater than us"* to be able to work in a
	team, co-operation and co-creation, alignment and finalizing the 3-hour
	process
	*https://processproject.eu/teaser-video-on-process-project/
Course contents	The course contains 6 workshops with different objectives that are
	explained hereafter
Evaluation scale	Pass/Fail
Names of SESS trainers	Marcella Zoccoli, Ari Korhonen
Part 1	
Title	Prelude & Practice - Introduction to SES Skills

#### 18

Description	COMPLEXITY "Sonaatti" is the title of the 6 ProCESS workshops
	collection conceived as a journey by JAMK SESS Trainers Marcella Zoccoli
	and Ari Korhonen. The participants will learn and develop their personal
	attitude in SES Skills by training activities and working following two
	directions: knowledge and wisdom (experience). Through different
	approaches and techniques of the ARTS (e.g., artistic, creative, and
	contemplative disciplines), they will shape their personal SES training
	design.
	With the aim of facilitating the students' approach to the work and the
	1
	profound meaning behind it, this SES Skills journey inspired by the work
	of Otto Scharmer (Theory U) and "I' Approach Complexe" of Edgar
	Morin, will follow the metaphor of the three different topical-typical
	moments of the Sonata form*: the exposition, development, and
	recapitulation.
	This flow will frame the rhythm of the learning-development process and
	create a coherent narrative of workshops with the aim of the flourishing
	and the activations of the SES Skills in the individual (private) and the
	collective (public) dimensions.
	Askiriking
	Activities:
	Welcoming and Preparation
	Introduction to the Complexity "Sonaatti" journey
	Presentation of the 6 Workshops
	Q&A
	Active demonstration & Practice
	Nurturing moment - Leave-taking, Time for Feedback
	Musical momentum and relaxation
Time	1 hour
Instructions	Attitude to the workshops journey
	Dedication - Commitment - Respect – Responsibility
	- We request you to prepare yourself to join the workshop in a
	conducive way and that you participate with appropriate circumstances
	and behavior (not eating, appropriate dress, etc.)
	- During the workshops laptop and mobile should be switch off or in
	silent mode - you can take notes during the briefing and debriefing
	- During the workshops there will be short break moments
	- During the workshop, no videos but ok pictures
	burning the workshop) no videos but on pictures
	Music workshops: free dress code, the practice concentrates on
	listening, hearing, experiencing and playing, not that much of a physical
	movement
	<b>Theater Lab</b> : casual comfortable dress for physical movements
	· ·

#### **WORKSHOP SYLLABUS – EXAMPLE 3**

Training day for sensorial, emotional and spiritual skills

General description	
Course title	Training day for sensorial, emotional and spiritual skills
Time	7 hours
Sequencing	6 parts
ECTS credits if applicable	n/a
Course competences	Awareness, connectedness, alignment
Course objectives	To get familiar to solve complex problems with sensorial, emotional and
	spiritual skills
Expected outcomes	Understanding the concepts of complexity and SES skills, the meaning of
	participant attitude and commitment, being able to connect to oneself and
	others to be able to work in a team, co-operation and co-creation,
	alignment and finalizing the 7-hour process
Course contents	The course contains 6 parts of different objectives that are explained
	hereafter
Evaluation scale	Pass/Fail
Names of SESS trainers	Simona Noveanu, Sorin Şuteu, Remus Lungu and Violeta Firescu
Part 1	
Title	Prelude and practice: Introduction to SES skills and complexity
Workshop objective	The presentation of the 7-hour workshop to understand the concept of SES
	skills and to get some theoretical background for the workshop. The

	<u> </u>					
	theoretical background will be explained from the standpoints of Theory U and design thinking crystallizing into ProCESS method. Using various exercises (moving, dancing, drawings, observation and storytelling) participants learn to be aware of their SES skills and to associate them with complex problems solving.					
Outcomes	Understanding the concepts of complexity and SES skills.  Acknowledging the sensorial, emotional, and spiritual diversity of the group and the meaning of our contemporary world complexity (including organisations).  - Participants identify SES similarities and divergences in their group.  - Participants become aware of the human diversity and complexity of an organisation					
Place in ProCESS method	Part #1					
Description	Our life means multiple and variable interactions between human beings, as components of the world complex system. A complex system is open, with several components which are not constant (varying in time), so it is often not possible to understand how each component of the system evolves. When talking about organizational complexity, it is important to view, understand and develop the organizational human side, helping people to become the actors of their life, more creative and performant. According to the theory of embodied cognition, human cognition is influenced by the experiences of the body in a physical world. Furthermore, the brain is not just connected to the body, but the body activities also influence the brain. For example, 70-80% of the human brain is related to hands and this link is twofold, thus working with hands develops the human brain.  According to design thinking, a problem-solving method used in a complex system, the reality is constructed by the people living it, and decisions are more emotional than logic. To use design thinking, sensorial and emotional skills – that allow people to emphasize with the user, not only at a single user but also at his/her interaction with a wider environment, even universe – are needed. Skills to look holistically at complex problems are also needed, to be able to look into the future, to understand "the connectedness or relationship that a person has with their self, others, the environment and a divine or a transcendent being or concern" (spiritual skills). These skills in combination are called SES skills.  Based on the theory of embodied cognition and design thinking, the ProCESS methodology aims to develop an original and innovative methodology to deal with complex management cases through alternating sequences of mobilization of Sensory, Emotional, and Spiritual (SES) intelligence, in addition to rational capacities.  To train SES skills, the ProCESS method uses the Theory U approach. The essence of Theory U is that by moving through the "U" process					
Time	1 hour					
Instructions	Exercise 1 – Warming-up activity WELCOME TO SES-WORLD					
	Aim: Welcome participants					

- 1. The trainer invites the participants to form a circle in a wide space, on a musical background.
- 2. The trainer asks participants to perform different movements in the space, according to instructions. For example, participants are asked to greet each other in different ways, to perform certain movements independently, to imitate the movements of the trainer or a designated participant.
- 3. **Reflection.** Participants share feedback about their experience. How did the participants perceive their state (physically, mentally, and emotionally) before, during and after the exercise?
- 4. **Evaluation.** Awareness of mood change during the exercise.

#### Exercise 2 - TOGETHER: GROUP HANDPRINT

**Aim:** Ensure convergence between participants in place and time and understand the concept of SES skills

- 1. The trainer invites the participants in turn to draw on a large sheet of paper the outline of their palm.
- The trainer asks each participant to write down the following: I.
   Name/ II. An element of nature (universe) with which they feel
   connected at the workshop/ III. A word to describe the state of the
   moment/ IV. The main human quality that he/ she appreciates in a
   person.
- 3. **Reflection.** The participants notice similarities, but also the sensory, emotional and spiritual diversity of the group. Definitions for SES skills are emerging. The trainer mentions that the first artistic work of the group was created, referring to the prehistoric rock art and the symbol of the handprint (identity and presence).
- 4. The trainer compose a short narrative of the handprint of the group created, in terms of complexity (remarks personal value / collective value / similarities and divergences / group synergy).
- 5. Conclusion. We are different, each person has a unique value, and the whole always represents more than the sum of the parts (the discovery of collective thinking). Participants are encouraged to be present, to be proactive, to feel comfortable and to generate different ideas and perspectives for the same situation. The participants are encouraged to enjoy "the ProCESS journey" that will continue highlighting "the ProCESS gift" for participants increasing their awareness, alignment and connectedness. The trainer briefly presents the next five parts of the SESS workshops.
- 6. **Evaluation.** Participants' capacity to identify various SES skills.

#### Exercise 3 – SIMPLE, COMPLICATED, COMPLEX OR CHAOTIC PROBLEM?

Aim: Discover complexity and complex problem meaning

1. The trainer asks participants to give examples of complex problems, discussing examples of complex systems, tasks and problems. For example, preparing a cake (a simple problem when you know the recipe), a plane (a complicated system, but also a complex one if the system opens, with a new variable which has

		never been considered before – such as a bug in software,
		terrorists, extreme climate conditions), etc.
	2.	The trainer asks participants: How might you apply elements of
		complexity to the organizational problem solving? The trainer
		allows time for discussion on organizational complexity and
		problems when integrating new activities, societal problems like
		religion or connection with the universe, gender equality, ethics,
		environmental responsibility, or unforeseen events.
	3.	<b>Reflection.</b> Participants share feedback about different
	0.	perceptions on complexity and complex problems.
		persopsions on somptoms, and somptom productions
	Exercis	e 4 – SES SKILLS LEVEL EX-ANTE
	Aim: E	valuate SES skills
	Partici	pants perform their SES Evaluation (ex-ante) at the end of Part 1
	worksh	nop, using the ProCESS questionnaire for SES evaluation.
Materials needed	1.	Exercise 1 – a large room, music collage
	2.	Exercise 2 – a large sheet of paper, colored pencils, markers
	3.	Exercise 3 – flipchart, markers
	4.	Exercise 4 – ProCESS SESS evaluation questionnaire.
Tips & Experience	•	Exercise 1 – Other examples: the participants group together in
Using		pairs, introduce themselves and respond one by one to the
		questions: What was the first thing you noticed when you entered
		the room? or How do you feel at the moment? What was the last
		pleasant moment before attending the workshop?
	•	Exercise 2 – Watercolors handprints can also be used. Prepare in
		advance several containers with watercolors and ask participants
		to use painting handprints.
		Exercise 3 – Be prepared with examples of different types of
		problems (simple, complicated, complex and chaotic ones) and
		encourage participants to come up with their own examples for
		each of the four types of problems.

Part 2						
Title	Power of bo	dy and m	ind			
Workshop objective	Introduction	of natura	l and physical life			
	The purpose	is to raise	e awareness of the	e impo	rtance of the senses,	
		emotions and spirit in perceiving and relating the individual to the				
	surrounding world.					
Outcomes		Connect to ourselves				
		•			titude of information	
			~	ainly v	isual and auditory) and face	
		•	ceptual errors.	L!		
		•			n categories of emotions and	
		tions.	unierent ways in	WITICIT	individuals respond to	
			aalize that everyo	ne has	their own vision of life the	
		<ul> <li>Participants realize that everyone has their own vision of life, the usefulness of understanding and defining a purpose in life, and last</li> </ul>				
	but not least, they identify and rank their own values.					
Place in ProCESS method	Part #2		,,,			
Description	We live in an extremely diverse and complex world that we become aware					
·					elopment, through our own	
	senses, expe	senses, experiencing a series of emotional states and sometimes having spiritual experiences.				
	spiritual exp					
	Better insight and understanding of the three sides – sensory, emotional and spiritual – will allow us to better integrate into the environment and the community. The aim is to perform exercises of visual and auditory					
	perception, recognition and understanding of the manifestation of our					
	own emotions, as well as identifying our own purpose in life and ranking					
Time	our own valu	ies.				
Instructions	+	IDENITIEV	ING DERCEDTION	FRROE	28	
matractions	Exercise 1 – IDENTIFYING PERCEPTION ERRORS  Aim: Confront participants with situations where they have misleading					
	visual percer				are they have impleading	
			esents a sequence	e of ima	ages.	
		•	•		ked to identify what those	
	images suggest or to identify certain mismatches.					
	_		-		leting, refining, or debating	
			leagues say.			
		-		-	esents an optical illusion.	
				•	illusion is revealed, the	
					initial perception deceived?	
			•	cal illu	sion was revealed?	
	(Disappointment? Spite? etc.)					

- Conclusion: The expected conclusion is that, in some situations, an individual's perception of reality may be distorted or even misguided.
- 7. As a thought theme, the trainer can launch the question "How can we get the best possible perception of reality?" or he can prepare it by launching two preliminary questions: "Have you faced situations in which you drew certain conclusions, which then disproved themselves?" and "Are you tempted to judge things too quickly, or do you have the patience to distance yourself to better understand the situation?"
- 8. **Evaluation:** active participation and reflection.

## Exercise 2 – MUSIC AND MOOD: IDENTIFYING THE MOOD INDUCED BY MUSIC

Aim: Induce different moods through different musical passages

- 1. The trainer prepares the experiment with the help of some famous quotes about music and then asks participants "Do you think music is capable of changing your mood?"
- 2. Each participant receives a worksheet that notes songs from 1 to 5.
- 3. The participants listen to the 5 songs, one by one, and write down for each one the mood that each song induced.
- 4. The trainer gathers the cards and synthesizes on the board the moods mentioned by the participants for each song. The obtained results are discussed.
- 5. **Conclusion:** In order to expand the discussions, the trainer may ask: Do you use ambient music when you perform different activities? What are these activities and what kind of music do you listen to? What do you think are the advantages obtained in this way?

#### Exercise 3 – IDENTIFYING EMOTIONS THROUGH FACIAL EXPRESSIONS

**Aim:** Verify the ability to correctly perceive basic emotions through the mimics of the subject's face

- 1. The trainer distributes to the participants a worksheet on which they have to write down the identified emotions.
- 2. The trainer successively presents several facial images of a subject experiencing emotions and asks participants to identify them individually and write them down on their worksheets.
- Conclusion and evaluation: The results are noted on the board and the extent to which emotions have been interpreted correctly is assessed.

#### Exercise 4 – AWARENESS OF THE PURPOSE OF LIFE

Aim: Encourage participants to consider the search for a purpose in life

1. The trainer starts the discussion by asking: Have you had the opportunity to seriously ask yourself the question about your purpose in life? Is it important or not to find an answer to this question? What keeps us from finding a serious answer to this question?

t and the second	2. The traine	r presents a video sho	wing a	very simple an	d short		
	method of identifying your purpose in life and the participants are						
	encourage	d to actively apply this	s meth	od.			
	3. Conclusion	n: to inoculate the sea	rch fo	r purpose in life			
	4. Evaluation	: participants experie	nced t	he proposed me	ethod of		
	searching	a purpose in life.

	Luiopean onion			
	can see the human side of an organization and become responsible			
	managers.			
Time	1,5 hours			
Instructions	Exercise 1 – EMOTIONS AND REACTIONS			
	Aim: Awareness of own reaction to emotions			
	The trainer discusses with participants about feelings and the			
	"Feeling wheel" by Gloria Willcox.			
	2. The trainer next organizes teams with two participants and gives			
	them a sticky note with an emotion written on it, like: Guilty,			
	Loving, Rejected, Important etc. and asks some questions like: How			
	is the brain functioning under different emotions? How do I			
	manifest when I feel something?, for example: Fear (my			
	manifestation can be Freeze, Run, Fight).			
	3. Each participant writes down on the sticky note about each			
	manifestation for an emotion and puts it on the flipchart. The			
	trainer discusses the projection in time of thoughts according to			
	the emotions humans feel.			
	4. <b>Reflection:</b> The participants notice the differences, but also the			
	similarities, about how people react to emotions.			
	Exercise 2 – ATTENTION			
	Aim: Understand the importance of listening			
	1. The trainer tells the participants they are going to watch a video			
	and asks them to pay attention to the following aspects during the			
	video: What emotions do you identify in the video? Is the reaction			
	good? How do you think you can change dysfunctional emotions?			
	2. The trainer encourages the participants to focus on the 'See –			
	Listen – Feel – Connect' linkage.			
	3. <b>Reflection.</b> Participants are asked: What were some of the			
	qualities of the experience that we shared together? How might			
	you apply elements of our experience to the problem you have to			
	solve? Give enough time for discussion.			
	Exercise 3 – TRANSFORMATION			
	Aim: Find solutions for transformation			
	1. The trainer presents a video (balls video) and asks: What feelings			
	does it evoke and why?			
	2. The trainer uses the main words like 'See – Feel – Adjust' and			
	organizes the teams with two participants and asks the question:			
	How can we transform a dysfunctional emotion into a functional			
	emotion? Each team gives a response and arguments it.			
	3. <b>Reflection:</b> The participants notice the differences, but also the			
	similarities about how they can transform emotions. In the end the			
	trainer gives a ball to each participant and they draw on the ball			
Bassattle - 1 1	how they are feeling now.

- understanding the difference between personal and social values - understanding how values affect our decisions - understanding one's own cooperation style and removing one's own barriers to cooperation with others.  Time  1 hour  Exercise 1 – ALIGNING DECISION WITH COMMON VALUES Aim: Clarify the participants on the strongest values they have, on one hand, and the most strongly rejected ones, on the other hand, and to increase their awareness about the stance they adopt when relating decisions to be made with their values.  1. The trainer distributes the "Values and decisions" worksheet, containing a mix of personal and social values, to each of the participants. Participants should place a check next to each value they personally accept and an "X" next to values they personally reject.  2. The trainer allows some time for this activity. When all participa have finished, the trainer should ask each person to rank the the values they hold most strongly by writing the number '1' next to strongest value, then '2', then '3'. Each participant must then rate the three values they most strongly reject, writing 'A' next to the most strongly rejected, 'B' then 'C'.  3. The trainer collects the worksheets and facilitates a discussion about how these activities relate to values held and values reject based on a set of questions like the following:  • Was any of the participants forced by circumstances to make decisions that have nothing to do with his values?  • Was any of the participants forced by circumstances to make decisions that po against their values?  • Was any of the participants forced by circumstances to make decisions that po against their values?  • Was any of the participants forced by circumstances to make decisions that nave nothing to do with his values?  • Was any of the participants forced by circumstances to make decisions that nave nothing clarifying everyone' values for making decisions in the future?  • What is the significance of knowing/clarifying everyone' values for making decisions in the f	·					
The trainer facilitates the trainees to practice several exercises related - understanding the difference between personal and social values - understanding how values affect our decisions - understanding now sown cooperation style and removing one's own barriers to cooperation with others.  Time 1 hour 1 hour 1 Exercise 1 – ALIGNING DECISION WITH COMMON VALUES Aim: Clarify the participants on the strongest values they have, on one hand, and the most strongly rejected ones, on the other hand, and to increase their awareness about the stance they adopt when relating decisions to be made with their values.  1. Part 5					
Title	Processing towards self-transformation				
Workshop objective	To make difference, prototype, crystallize, embody and emerge				
	The purpose is to train participants in using creativity to solve practical and				
0	organizational problems, individually and in group.				
Outcomes Place in ProCESS method	To became autonomous and responsible  Part #5				
Description	During the exercises participants face unforeseen practical complex				
Description	problems and are put in the position to generate creative solutions to				
	solve the problems. The exercises allow a reflection on how the group				
	work was carried out, about the concept of design thinking and its				
	particularities, about morality issues in the context of the decision-making				
	process.				
Time	1,5 hours				
Instructions	Exercise 1 – THE PORCELAIN PLATES				
	Aim: Confront participants with an unforeseen practical problem and put				
	them in a position to generate creative solutions to solve the problem.  Participants experiment and assimilate a method of stimulating creativity,				
	which can be used to solve complex problems. The Nominal Group				
	Technique (NGT) shall be used.				
	1. The problem lies in a set of high-value porcelain plates that were				
	found in an extremely unstable position inside a glass-door cabinet				
	in a museum. Participants should look for solutions to remove				
	those plates without damaging them.				
	2. The trainer exposes the problem, displays the image with the				
	plates in the closet and asks the participants to find (individually, without consulting with colleagues) solutions to solve the problem,				
	which they write on a worksheet. The explanations must be				
	concise but sufficient. Participants have 10 minutes for this step.				
	During this step they are encouraged to feel free to mobilize their				
	SES capacities through involvement in activities like plasticine				

- modeling, painting, music listening, meditation, mindful walking etc.
- 3. Each participant verbally submits a proposal, limited to the necessary explanations. Other participants are not allowed to intervene with opinions on the proposal. The trainer writes the proposal on the board/screen. Several passes are made to each participant, until the proposals are exhausted or until the time limit is reached.
- 4. Each proposal is next analyzed and possibly improved through plenary debates.
- 5. The assessment of the solutions is done successively by each member of the group, who assigns a number of points to certain solutions that they prefer.
- The trainer determines the number of points available to each participant. As a rule, this is about half of the number of solutions listed on the board (to force participants to focus only on the best solutions).
- 7. The trainer notes on the board the points awarded by each participant and sums them up for each solution. The group solution is the one that totals the highest score.
- 8. **Conclusion:** The trainer presents the particularities of the nominal group technique (TGN) along with its advantages and disadvantages. The trainer can also present other methods of stimulating creativity (e.g., brainstorming, brainwriting, Philips 66, Frisco, etc.)
- 9. **Evaluation:** involvement of participants; number of proposed solutions.

#### **Exercise 2 – THE SPAGHETTI TOWER**

**Aim:** Encourage participants to creatively achieve an unconventional construction that requires design and practical realization.

The exercise requires intense teamwork and the ability of the participants to collaborate.

- 1. Groups of 3-7 people are formed.
- 2. The necessary materials are assigned to each group.
- 3. The trainer explains the task of building a tower of spaghetti, as high as possible, on top of which a marshmallow should be placed.
- 4. The tower must stand alone on the tabletop (cannot be suspended or supported).
- 5. The height is measured from the tabletop to the marshmallow.
- 6. The working time is set at 20 (max. 30) minutes.
- 7. At the end of the working time, all the constructions are inspected, and the trainer measures the height of each one. The trainer announces and congratulates the winning group.
- 8. The trainer presents a short video of the conclusions of those who designed and used this exercise.
- 9. **Reflection:** the trainer invites the participants to meditate on the way the activity is performed, suggesting the following questions: How did I act within the group? How much and how did I

	contribute? Is there something I could do and didn't do? Why? Who took over the leadership of the group and how did it manifest? What have I learned from this exercise about myself and my behavior/others and their behavior/the functioning of groups?  10. Finally, the trainer underlines the concept of Design Thinking.  11. Conclusion: The exercise allows a reflection on how the group work was carried out, based on questions proposed by the trainer. Also, the exercise is the ideal foundation on which the trainer underlines the concept of design thinking and its particularities.  12. Evaluation: involvement of participants, level of collaboration.					
Materials needed	Exercise 1 – one picture that illustrates the exercise, worksheet.

·				
Workshop/ Part objective	Participants are guided to use their SES skills and to align with objectives and motivations for different roles in the company. They use SES skills and			
	share the knowledge and wisdom with their team for complex problem-solving.			
Outcomes	Use SESS for complex problem-solving in our contemporary world			
	including in organizations.			
	- participants apply SES skills in different case studies			
	- participants can apply their SES skills in the company and become			
	responsible managers			
Place in ProCESS method	Part #6			
Description	In real world, SES skills help us to open our minds to multiple and complex			
	viewpoints and perspectives on different things. This helps us to resolve			
	the problem better, to be creative, and see it from the perspective of different stakeholders.			
	Participants learn how to connect, they work together, discuss and resolve			
	complex problems from different points of view or perspectives.			
Time	1 hour			
Instructions	Exercise 1 – WELCOME TO COMPLEXITY			
	Aim: Relax and direct the energy for this workshop			
	For the introduction the trainer uses a relaxing musical sequence			
	and asks participants: What is complexity for you, in one word,			
	after you attended the workshop?			
	<ol><li>Each participant writes down on a sticky note a word reflecting what complexity represents for him and places the sticky note on a</li></ol>			
	flipchart.			
	Reflection. The trainer and participants analyze which are the			
	most frequent associations they made with complexity. They also			
	share feedback about their experience during workshop: What			
	were some of the qualities of the experience that we shared			
	together? How might you apply the SES experience to the real lif			
	Give enough time for discussions.			
	Exercise 2 – ARTWORK AND TEAM			
	Aim: Work in team applying SES skills			
	1. The trainer asks participants, one by one, to paint anything they			
	want on a large sheet of paper. A participant begins to paint and			
	the next one continues the painting without knowing the meaning			
	of what his/her colleague has painted.			
	The participants analyze the drawing that they have created together. The trainer highlights that a new artistic work of the			
	group has been created.			
	3. <b>Reflection.</b> Participants are asked: What were some of the			
	qualities of the experience that we shared together? How might			
	you apply elements of our experience in the practical world (work,			
	life etc.)? Give enough time for discussions.			
	Exercise 3 – GRATITUDE			
	Aim: Connect and align with this moment			
	7 Connect and angir with this moment			

	1. The t	rainer	asks participants to position	on in a circle and invites them			
		to share insights and a gratitude word about the entire SES					
	expe	rience	they had during the works	shop.			
	2. Give	<ol> <li>Give time to share any general impressions about the workshop, focusing on the positive aspects. A prompt could be: "What would you like to see/learn/hear more?"</li> <li>Reflection. Participants are asked: What will be your gift for</li> </ol>					
	3. Refle						
		others, based on your SES experience? Give enough time for discussions.					
	4. The t	rainer	reminds the participants a	bout the group handprint			
	creat	ed du	ring Part 1 workshop, show	s it and asks them to write a			
	closir	closing word about the entire SES journey, next to the handprint					
	they	they created at the beginning of the session.					
Materials needed	1. A larg	1. A large roll of paper, brushes and colors for paintings					
	2. Pape	r and <sub>l</sub>	pencils				
Tips & Experience	• Make	Make sure that the participants get into an emotional state of					
Using	mind	mind while seeing the video sequence – you can provoke this with					
	releva	relevant questions.					
	Be av	Be aware that participants are not used to drawing/painting and					
	enco	encourage them. Usually, they feel surprised about their creativity					
	when	when they paint or draw. Emphasize the intuitive nature of					
	proce	process.

#### **WORKSHOP SYLLABUS – EXAMPLE 4**

General description	
Course title	Training day for introducing the ProCESS method to deal with complex management cases through alternating sequences of mobilisation of Sensory, Emotional, and Spiritual (SES) intelligences, in addition to rational capacities.
Time	7 hours
Sequencing	6 parts
ECTS credits if applicable	n/a
Course competences	Awareness, connectedness, alignment
Course objectives	Be aware that sensorial, emotional and spiritual capacities in line with rational capacities can help to solve complex problems in business and management.
Expected outcomes	Understanding the need for integral approach to address complexity of contemporary world and management. Understand the use of the SES skills (being able to connect to oneself, experiencing body abilities

<b>-</b>	
	through SES skills) to help solving complex problems, incentivize the
	desire to train them to improve their performance.
Course contents	The course contains 6 parts of different objectives that are explained hereafter
Evaluation scale	None
Names of SESS trainers	Dace Andersone; Inga Berzina; Inese Sluka; Iveta Ludviga
Part 1	
Title	Introduction to complexity and SES skills
Objectives	To provide theoretical foundation to navigating into complexity and the need for the ProCESS method
Outcomes	Understanding the concepts of complexity and need for integral approach to address them.
	Understanding the selected business problem and complexity around it.
Place in ProCESS method	Part #1
Description	We live in the VUCA (Volatile, Uncertain, Complex, Ambiguous) world and to navigate in this world VUCA skills (Vision, Understanding, Clarity, Agility/Adaptability) are needed. For centuries universities in their teaching and learning processes have implemented tools of traditional logic and rationality which presume that the world is stable, knowable, and predictable. However, the contemporary increasingly complex business context, there is a growing need for novel and diverse ways of approaching management education. Only recently management learning scholarship has acknowledged that learning also relates to embodied practices.  According to the theory of embodied cognition, human cognition is influenced by the experiences of the body in a physical world.  Furthermore, the brain is not just connected to the body, but the body activities also influence the brain. For example, 70–80% of the human brain is related to hands and this link is twofold, thus working with hands develops the human brain.  According to design thinking, the reality is constructed by the people living it, and decisions are more emotional than logic. To use design thinking, sensorial and emotional skills – that allow people to emphasize with the user, not only at a single user but also at his/her interaction with a wider environment, even universe – are needed. Skills to look holistically at complex problems are also needed, to be able to look into the future, to understand "the connectedness or relationship that a person has with their self, others, the environment and a divine or a transcendent being or concern" (spiritual skills). These skills in combination are called SES skills.
Time	1 hour
Instructions	Openminded attitude and mindset to be able to play and embody complexity.  Theoretical presentation is sequenced with discussions and/or visualization of complexity of the selected problem (colleague or picture)
Materials needed	Video projector and power point.
	For visualization of the problem: paper, pencils, pictures, etc

Part 4									
Title	Sensing the world								
Workshop objective	Sensing the complexity of our contemporary world including								
	organisations.								
Outcomes	Using works of art (paintings, sculptures) participants learn to see details								
	and to notice unusual in usual things and objects. They learn to feel the								
	world and associate emotions with ordinary objects or processes. At the								
	end of the workshop:								
	- participants identify unnoticed details about the world around;								
	- participants are able to see the human side of an organisation and								
	become responsible managers.								
Place in ProCESS method	Part #4								
Description	The world is a really complex place, but it is also a really vivid place and,								
	in a sense, works of art have all those qualities. They are really complex.								
	They reveal a lot as you look closely at them. They are multi-layered and								
	they have many dimensions.								
	Like the real world, they are open to multiple interpretations, multiple								
	viewpoints. Bringing different viewpoints and perspectives which we can								
	see on a work of art often makes it richer, just as in real life – looking at								
	phenomenon or problem from multiple perspectives helps us to								
	understand it better and to see it from the perspective of different								
	stakeholders.								
	You spend two or three minutes in front of a work of art, looking closely,								
	and you begin to understand and see so much more. Now, you can spend								
	hours and hours looking at works of arts								
	Works of art, like paintings, provoke emotions. The same do poems.								
	Writing an ode is an activity which allows to feel and see unusual in an								
	ordinary object. Thesis workshop transfers this practice of looking at								
	works of art, seeing it, as well as sensing and feeling it, to business world								
	and complex problems.								
Time	1 hour								
Instructions	Attitude expected from participants: Dedication - Commitment - Respect								
	– Responsibility – Confidence – Positive and openminded attitude.								
	Activity can be organized in a museum or art gallery.								
Materials needed	Room with chairs and with or without tables. Video projector and power								
	point.								
	Work of art with many details (electronic)								
	Template for writing the Ode for each participant								
	2. Paper and pencil								
Tips & Experience Using	Make sure that the participants get into a positive emotional state of								
	mind while observing the painting – you can provoke this with relevant								
	questions.

Part 6									
Title	Applying embodied creativity in relation to a complex problem - 'SESiation'								
Workshop objective	Using Lego bricks participants build (model) solutions to the complex								
	problems and discuss their models – they let their hands and senses to								
	find the solution. By building with hands, they build in their minds.								
Outcomes	Use SESS for complex problem-solving in our contemporary world								
	including in organizations.								
	- participants are able to use SES skills to generate solutions or ideas								
	- talking about the models adds metaphors and emotions to the								
Diago in DracCCCC weether I		proposed solutions, participants are able to 'feel' the solution
